The Architect Registration Exam (ARE) is part of the licensing requirements for U.S. and Canadian architects. A computerized, closed-book exam, the ARE is administered year-round at a network of test centers. The topics represented on the ARE may be roughly divided into two areas: structural and nonstructural. We offer two primary study guides for the exam -- one volume devoted to each area. Each volume includes concise reviews of the exam topics, with practice problems and solutions. Volume I: Structural Topics offers a comprehensive review of ARE structural exam topics, including structural systems, building loads, wood and steel construction, soils and foundations, and lateral forces. The book provides 160 practice questions, with solutions, and test-taking strategy. The text is enhanced by illustrations, figures, and tables, along with a detailed index.

Sarafino's goal in Principles and Procedures for Modifying Behavior is to create a clear and engaging instrument that describes ways to analyze one's own specific behaviors in terms of the factors that lead to and maintain them and ways to manage those factors to improve the behaviors. The text is based on research, theory, and experiences to explain and provide examples of the concepts and methods of self-management in a comprehensive text. It focuses on topics in applied behavior analysis, behavior modification, behavior therapy, and psychology of learning. Two general topics shaped this text: making the book relative to a variety of fields by describing applications in psychology, education, counseling, nursing, and physical therapy and different academic levels and preparation. Several important objectives guided the content and organization of the text which is designed to cover a large majority of tasks or concepts that the Behavior Analyst Certification Board (www.bacb.com) has identified as the field's essential content and should be mastered by all behavior analysts.

Volume I: Structural Topics is a comprehensive review of all structural portions of the ARE, including structural systems, building loads, wood and steel construction, soil and foundations, lateral forces, and long-span structures. Clear explanations of terms, procedures, and theories, illustrated with more than 200 figures and tables, reinforce the review. This volume also includes an introduction to the exam and the grading process, and 160 practice questions with solutions.

AN INTRODUCTION TO BEHAVIOR ANALYSIS Explore a fascinating introductory treatment of the principles of behavior analysis written by three leading voices in the field An Introduction to Behavior Analysis delivers an engaging and comprehensive introduction to the concepts and applications for graduate students of behavior analysis. Written from the ground up to capture and hold student interest, the book keeps its focus on practical issues. The book offers readers sound analyses of Pavlovian and operant learning, reinforcement and punishment, motivation and stimulus control, language and rule-following, decision-making and clinical behavior analysis. With fully up to date empirical research references and theoretical content, An Introduction to Behavior Analysis thoroughly justifies every principle it describes with empirical support and explicitly points out where more data are required. The text encourages students to analyze their own experiences and some foundational findings in the field in a way that minimizes jargon and maximizes engagement. Readers will also benefit from the inclusion of: A clear articulation and defense of the philosophical assumptions and overarching goals of behavior analysis. A thorough description of objective data collection, experimental methods, and data analysis in the context of psychology An exploration of the core principles of behavior analysis, presented at a level comprehensible to an introductory audience A broad array of principles that cover issues as varied as language, substance-use disorders, and common psychological disorders Perfect for students taking their first course in behavior analysis or behavior modification, An Introduction to Behavior Analysis will also earn a place in the libraries of students pursuing certification through the Behavior Analysis Certification Board or taking courses in the applied psychological sciences.

Offers a comprehensive review of structural topics and helps you prepare successfully for the General Structures and Lateral Forces divisions on NCARB's Architect Registration Examination (ARE). Hundreds of examples, illustrations, and tables enhance the text and 160 multiple-choice practice problems with solutions help you determine areas where you need additional study. This sixth edition is updated to reflect the 2003 International Building Code which is referenced on the exam. The chapters that were updated from the fifth edition are: Ch. 2: Loads on Buildings Ch. 8: Building Code Requirements on Structural Design Ch. 9: some minor changes due to updates reflecting the National Design Specifications for Wood Construction (NDS) 2001. Ch. 13: Lateral Forces--Wind Ch. 14: Lateral Forces--Earthquakes
