This title explores the underground caves, sinkholes and underground rivers of Jamaica.

This volume presents an overview of the main hazards affecting karst, including collapse and subsidence phenomena, hydrological hazards and human-induced geohazards. Consideration is also given to the problems of geohazard management in karst. Aimed at providing the reader with worldwide case studies, the contributions cover a range of geological and morphological settings. Geographically, the fourteen papers discuss very different karst areas, from North America, the Caribbean and Asia to several karst areas in Europe, including the British Isles, Spain, France and Italy.

The Encyclopedia of Caves and Karst Science contains 350 alphabetically arranged entries. The topics include cave and karst geoscience, cave archaeology and human use of caves, art in caves, hydrology and groundwater, cave and karst history, and conservation and management. The Encyclopedia is extensively illustrated with photographs, maps, diagrams, and tables, and has thematic content lists and a comprehensive index to facilitate searching and browsing.

The Earliest Inhabitants aims to promote Jamaican Tainan archaeology and highlight the diverse research conducted on the island's prehistoric sites and artefacts. Of the fourteen papers in this volume, six are reprints of seminal articles that are not widely available and eight are based on recent archaeological research. The chapters are organized by thematic divisions that reflect the most important areas of research: Assessment and Excavations of Taino Sites looks at the various archaeological investigations across the island; Taino Exploitation of the Natural Resources examines how the Tainos took advantage of the natural environment to fulfil their needs; Analysis of Taino Archaeological Data highlights research conducted on various artefacts; and Taino Art Forms focuses specifically on evidence of Taino cave art and its impact on the interpretation of the Jamaican Taino livelihood. In her introduction, Lesley-Gail Atkinson explains, "Jamaican prehistory is regarded as one of the least studied Caribbean disciplines. That is not necessarily the case; the fact is that published Jamaican archaeological research has not had sufficient international circulation. This has resulted in misconceptions about lack of scope, research activities and information on the Jamaican Taino." This volume seeks to redress this lack: invaluable in its own right as a collection of distinguished scholarship, The Earliest Inhabitants is remarkable, too, for being the first compilation on the Jamaican Tainos since 1897. This collection will appeal to a wide audience of archaeologists, historians, students of archaeology and anyone interested in Jamaica's history and archaeology

Pre-Columbian Jamaica represents the first substantial attempt to summarize the prehistoric evidence from the island in a single published account since J. E. Duerden's invaluable 1897 article on the subject, which is also reprinted within this volume.

Discusses Jamaican traditions, culture, religion, media, literature, and arts.

A selection of papers on a broad range of military topics ranging from the strategic perspective, through analyses of historical battles at the operational and tactical levels, to the use of advanced technologies applied to present-day military problems.

The Oxford Handbook of Caribbean Archaeology provides an overview of archaeological investigations in the insular Caribbean, understood here as the islands whose shores surround the Caribbean Sea and the islands of the Bahama Archipelago. Though these islands were never isolated from the surrounding mainland, their histories are sufficiently diverse to warrant their identification as distinct areas of culture. Over the past 20 years, Caribbean archaeology has been transformed from a focus on reconstructing culture histories to one on the mobility and exchange expressed in cultural and social dynamics. This Handbook brings together, for the first time, examples of the best research conducted by scholars from across the globe to address the complexity of the Caribbean past. The Handbook is divided into five sections. Part I, Islands of History and the Precolonial History of the Caribbean Islands, provides an introduction to Caribbean Archaeology and its history. The papers in the following Ethnohistory section address the diversity of cultural practices expressed in the insular Caribbean and develop historical descriptions in concert with archaeological evidence in order to place language, social organization, and the native Taʼnos and Island Caribs in perspective. The following section, Culture History, provides the latest research on specific geographical locations and cross-cultural engagements, from Jamaica and the Bahama archipelago to the Saladoid and the Isthmo-Antillean Engagements. Creating History, the fourth section, includes papers on specific issues related to the field, such as Zooarchaeology, Rock Art, and DNA analysis, among others. The final section, World History, centers on the consequences of European colonization.

Papers presented at a conference held at New York in 1995.
