The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

CHOICE Outstanding Academic Title 2016 Genocide and Gender in the Twentieth Century brings together a collection of some of the finest Genocide Studies scholars in North America and Europe to examine gendered discourses, practices and experiences of ethnic cleansing and genocide in the 20th century. It includes essays focusing on the genocide in Rwanda, the Armenian genocide in the Ottoman Empire, the Holocaust and ethnic cleansing and genocide in the former Yugoslavia. The book looks at how historically- and culturally-specific ideas about reproduction, biology, and ethnic, national, racial and religious identity contributed to the possibility for and the unfolding of genocidal sexual violence, including mass rape. The book also considers how these ideas, in conjunction with discourses of femininity and masculinity, and understandings of female and male identities, contributed to perpetrators' tools and strategies for ethnic cleansing and genocide, as well as victims' experiences of these processes. This is an ideal text for any student looking to further understand the crucial topic of gender in genocide studies.
